

Process for the development, review and continual improvement of the provisions of the *Forest Practices Code*

The forest practices system's adaptive management process, in relation to many biodiversity values, can be summarised as follows:

- The most up-to-date information is gathered from published and non-published sources to determine the 'expert opinion' with respect to the value in question and its likely response to various forms of forest management.
- The information gathered is used to develop management actions for the value. This may be done through a technical working group (e.g. fauna/flora strategic planning groups, hollows working group) convened for the particular value or issue.
- Comment is sought from all stakeholders, particularly practitioners (FPOs), on the proposed management actions and any associated implementation tools (e.g. policies, DSS, technical notes, etc.).
- Public comment will be sought where the management actions are deemed to be changes to the *Forest Practices Code* or changes to endorsed management prescriptions under the Regional Forest Agreement.
- The final decision on adoption or amendment of the management actions and any associated implementation tools is made by the Board of the Forest Practices Authority (and Secretary of DPIPW in the case of actions relating to threatened species) who may seek advice from the Forest Practices Advisory Council, Threatened Species Scientific Advisory Committee and any other advisory bodies as required and in accordance with the Agreed Procedures under the *Forest Practices Code*.
- Training, education and awareness programs are conducted on a regular basis for forest practices officers, other planning and supervisory staff employed throughout the forest industry and landowners.
- The management actions are incorporated into forest practices plans through approved planning tools and procedures.
- The implementation of forest practices plans is monitored by Forest Practices Officers and FPA Compliance Officers.
- Research is conducted to improve understanding of the value in question and its response to different impacts.
- Monitoring is carried out by specialists to assess the efficacy of management actions.

The management actions are reviewed and revised on a regular basis to incorporate the findings of new research, results from monitoring and operational experience.

Document control log table

Document summary information

Document name	Process for the development, review and continual improvement of the provisions of the <i>Forest Practices Code</i>
Version	1.0
Trim record	2011/202028
Owner	Sarah Munks
Author(s)	Sarah Munks
Release date	December 2011
Release Approved by	CFPO
Release status	Public document

Version control

Version	Date	Author(s)	Summary of changes
1.0	Dec 2011	Sarah Munks	Original document
1.1	July 2012	Graham Wilkinson	Addition of public comment phase in the process

Stages required for release outside FPA

Category of advice	C	
Stages	Required/not required	Completed (date)
Specialist	Not required	
Line Manager	Not required	
Peer/FPO/stakeholder review	Required	Dec 2011
CFPO	Required	Dec 2011
FPAC	Not required	
Board	Not required
